

**KIP 71 Series with System K Software
Online Technical Review
Effective - June 1, 2015**

Dear KIP Authorized Dealer Technicians

Based on the previous successful completion of KIP 7170 technical training, all KIP Authorized Dealer Technicians are authorized to perform technical service on the new KIP 7170K/ KIP 71 Series.

However, due to the new features of these new multifunction devices, along with the new System K software, it is mandatory that KIP Authorized Dealer Technicians review and complete the online technical differential review as well as the KIP System K Software tutorials. This online content has been designed to allow KIP 7170 authorized technicians to successfully install, service and support these new models.

Please visit the KIP web site - Dealer Area and click on the KIP 71 Series Online Training as well as the System K Tutorials. Upon your review of all the online content pertaining to these models and the System K software, online questionnaires must be completed for certification.

After verification of the following a certificate of completion will be provided:

- you are a current employee of a KIP Authorized Dealer with a KIP 71 Series model on order
- you are previously trained on the KIP 7170 at a KIP location (or have completed online training to have such model certification)
- a minimum 90% on each of the questionnaires

Please note that you are allowed only one attempt to successfully complete the online questionnaires. As such, please fully review the online documentation and videos prior to completing the questionnaires.

Please also note KIP will also host classroom workshops at various KIP locations for System K software. We recommend that you attend a workshop for “hands on experience” of the new System K software. Please visit the KIP website for dates and locations.

Thank you,
KIP Technical Support Team
